Thanks to: ====== ========================= ===== The myDBF web site, The DUEMaker web site, My own web site, Email support. Installation: ============== Installation of myDBF and/or the DUEMaker web site requires the installation of Java as well as

a JDK 1.2.1 or later on your machine. After installation, myDBF is installed in the path where the JDK is installed. Thereafter, Java and myDBF are both accessible from Windows Explorer. To run myDBF, click on a file with the ".dbf" extension. myDBF is a small, simple, easy-to-use but highly-featured database program that can handle DBase IV files. myDBF accepts a database filename as the first command

line parameter. This file will be loaded when myDBF is run. You can associate the dbf file extension with myDBF if you want to use myDBF as your default dbf program. When you then double-click a dbf file in Windows Explorer, myDBF will be launched and the selected dbf file will be loaded. Each time you open a dbf file, myDBF checks if there is a form with the same base name in the forms directory and will load that form

when available. myDBF can be used as a mail merge application using the special tag. Here are some key features of "myDBF": ⬚ Form designer, ⬚ HTML template based reports, ⬚ integeral syntax highlighted HTML editor, ⬚ zoomable print preview, ⬚ integral HTML 3.2 viewer, ⬚ table designer, ⬚ smart filter, ⬚ mail merge. ⬚ jansoft sample database, ⬚ form, report and help file.
